**RE: Draft Sampling and Analysis Plan (SAP)
Updated information for asbestos analyses
Coddington Point, NAVSTA Newport, Rhode Island**

Dear Ms. Lombardo and Ms. Crump:

The attached information is being forwarded for inclusion in the draft SAP under review for the planned investigation at the buried debris areas at Coddington Point (Site 23), Naval Station (NAVSTA) Newport, Rhode Island.

The attached information is related to the laboratory analyses for asbestos. Key worksheet sections that will be inserted into the next version of the SAP are included, or a highlight is provided where a key change will be made to an existing worksheet.

Also included are the SOPs for the laboratories for both asbestos in debris (bulk asbestos by PLM) and asbestos in soil (CARB 435 method), along with the accreditation for each laboratory.

NVL Laboratory is proposed because that lab has DOD accreditation for the PLM bulk asbestos analyses (EPA 600 Method). EMSL Laboratory is proposed for the asbestos in soil (CARB 435 Method) because they have accreditation from the State of Rhode Island for this method. There is no DOD accreditation for this analysis.

If you have any questions about this information, or would prefer an updated version of the draft SAP with this information included, please do not hesitate to call.

Sincerely,

A handwritten signature in cursive script, appearing to read "Neil Thurber".
